Moonshot Mariana Mazzucato 2021-04-06 Ruim vijftig jaar geleden ging de

mens naar de maan. Deze ongekende gebeurtenis was veel meer dan een wetenschappelijke topprestatie van de ruimtevaart. Zonder nieuwe vormen van samenwerking tussen de publieke en private sector was dit niet gelukt. Toeconoom Mariana Mazzucato vindt dat we de problemen van deze tijd, zoals stagnerende economische groei, klimaatverandering en toenemende ongelijkheid, met hetzelfde lef te lijf moeten gaan. En de coronacrisis zou nu voor overheden hét moment moeten zijn om op zoek te gaan naar een nieuw, permanent evenwicht tussen staat, bedrijfsleven en burger; naar een verandering van het huidige kapitalistische systeem. In Moonshot daagt Mazzucato economen, politici en ondernemers uit om na te denken over ambitieuze maatschappelijke doelstellingen, gedurfde langetermijninvesteringen en vernieuwende publiek-private samenwerking. Het is niet voldoende om fouten in de huidige economische markten en systemen te repareren. Toekomstgericht denken en een innovatieve economie zijn noodzakelijk voor een fundamentele transformatie van economie en samenleving.

Teaching Economic Inequality and Capitalism in Contemporary America

Kristin Haltinner 2018-01-02 This book discusses pedagogical solutions that enable students to see how capitalist processes and economic inequalities intersect and shape our assumptions and behaviours. The contributors provide thoughtful reflections on the struggles and opportunities instructors face in teaching about these topics while competing against the invisibility of capitalist forces and prevalent social myths, such as "anyone who works hard can achieve". This book will not only help instructors empower students to recognize economic injustice and its interaction with capitalist organization, but also develops and acts on transformative solutions. Through analysis of the classed dimensions of the current political, economics, and cultural climate, as well as presenting novel lesson plans and classroom activities, this book is of great value for college and university professors.

The Social and Economic Impact of New Technology 1978-84: A Select Bibliography Leslie Grayson 2012-12-06 Silicon chip technology; microprocessor technology;

information technology; or quite simply new technology. These are some of the names representing the microelectronics revolution depending upon the audience being addressed by speaker or writer. No previous new industrial development has caused such widespread publicity and discussion amongst users and researchers as the new technology. Concern is being expressed about the effects of new technology on employment, job satisfaction, social life, leisure activities and the economics of commerce and industry. The late 70s saw many doom-laden predictions of those effects but by 1983 both management and trade unions were taking a more objective view of the social and economic impacts, and many correspondents now see the new technology as a means of opening up new industries and overcoming the effects of world recessions. The "chip" has involved the factory floor, the office, the supermarket and the home. Electronic funds transfer, electronic shopping, microelectronic domestic appliances, word processors and microprocessor-controlled machinery mean that the new technology has pervaded all aspects of social and economic life, and the developed countries are now coming to accept it as part of society as a whole. Inevitably the flood of literature on the social and economic impacts of new technology has been overwhelming. Unfortunately the quality of information and arguments propagated at conferences, in journal papers and research reports has indicated that there has been little quantifiable evidence available on the effects of these impacts.

Class Questions Joan Acker 2005-12-08

Class is a particularly troublesome issue in the United States and other rich capitalist societies. In this feminist analysis of class, noted sociologist Joan Acker examines and assesses feminist attempts to include white women and people of color in discussions of class. She argues that class processes are shaped through gender, race, and other forms of domination and inequality. **Class Questions: Feminist Answers** outlines a theory of class as a set of gendered and racialized processes in which people have unequal control over and access to the necessities of life—processes including production, distribution, and paid and unpaid labor. Historically, gender and race-based inequalities were integral to capitalism and they are still fundamental aspects of the class system. Acker argues that capitalist organizations create gendered and racialized class inequalities and outlines a conceptual scheme for analyzing 'inequality regimes' in organizations. Finally, the book examines contemporary changes in work and employment and in economic/political processes, including current events like deregulation, downsizing, and off-shoring, that increase inequalities and alter racialized and gendered class relations. This book will appeal to readers interested in a feminist discussion of class as a

racialized and gendered process intimately tied to the capitalist economic system.

The Economics of Social Determinants of Health and Health Inequalities World Health Organization 2013 "This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"--

How Economics Should Be Done David C. Colander David Colander has been writing about economic methodology for over 30 years, but he goes out of

his way to emphasize that he does not see himself as a methodologist. His pragmatic methodology is applicable to what economists are doing and attempts to answer questions that all economists face as they go about their work. The articles collected in this volume are divided, with the first part providing a framework underlying Colander's methodology and introducing Colander's methodology for economic policy within that framework. Part two presents Colander's view on the methodology for microeconomics, while part three looks at Colander's methodology for macroeconomics. The book closes with discussions of broader issues.
